Machine Learning for Audio, Image and Video Analysis Francesco Camastra 2015-07-21 This second edition focuses on audio, image and video data, the three main types of input that machines deal with when interacting with the real world. A set of appendices provides the reader with self-contained introductions to the mathematical background necessary to read the book. Divided into three main parts, From Perception to Computation introduces methodologies aimed at representing the data in forms suitable for computer processing, especially when it comes to audio and images. Whilst the second part, Machine Learning includes an extensive overview of statistical techniques aimed at addressing three main problems, namely classification (automatically assigning a data sample to one of the classes belonging to a predefined set), clustering (automatically grouping data samples according to the similarity of their properties) and sequence analysis (automatically mapping a sequence of observations into a sequence of human-understandable symbols). The third part Applications shows how the abstract problems defined in the second part underlie technologies capable to perform complex tasks such as the recognition of hand gestures or the transcription of handwritten data. Machine Learning for Audio, Image and Video Analysis is suitable for students to acquire a solid background in machine learning as well as for practitioners to deepen their knowledge of the state-of-the-art. All application chapters are based on publicly available data and free software packages, thus allowing readers to replicate the experiments.

The Apex Alpha Male Daz El 2019-03-09 It's time to stop kidding yourself and become the man you were destined to be. Step up and into your power, now! Let's not beat around the bush, every man and his mother already know what an alpha male is. So with that in mind, I could easily try to catch your attention (and pocket) by luring you in with irresistible fancy titles (like -- DO YOU NEED MORE MONEY, WOMEN AND FRIENDS?), but like I've said -- you have heard it all before (you must be tired). I say that to say this, it is not my intention to brag or influence you into purchasing a book that promises superficial riches (any man with focus and drive can acquire that himself), that couldn't be further from my point. This Manual is for all the men who have always known they have something priceless deep down inside, who have a firm understanding when evaluating their life -- that they're far off the mark in terms of the greatness that resides inside of them. And due to prolonging/ignoring the critical inner voice that says "they are special/ they are great", may have now hit a crossroad, where the only option left is -- now or never. Do you remain in the sunken place, stay sailing, or swim for the prize (I'll leave it up to you to decide). Why the title -- Apex Alpha? Because it's a whole different ball game we dealing with here. We are talking about adoptng a mind-set and belief that is far beyond those of mere mortals (legendary status). Why add the -- Sigma edition? Well, whether we like it or not, these introverted men can't be ignored. Although they have been slept on by society, the rise of the Sigma male is here, and in full effect. The days as looking at the alpha male as the cream of the crop are over. There's a new man in town (and I don't mean Clint Eastwood/Sheriff, although ironically, he is considered an outlaw like Josey Wales) and he is all about business. Listen, I could go on forever, so I'll keep it short and sweet. If you resonate with my words (vibration) then lets rise up together, my friend. The Gates of Nirvana are open, all you have to do is walk through!

The Photomultiplier Handbook Tony Wright 2017 Photomultipliers are extremely sensitive light detectors that can detect single photons. In multiplying the charge produced by incident light by up to 100 million times, these devices are essential to a wide range of functions, from medical instrumentation to astronomical observations. This complete and authoritative guide will provide students, practitioners, and researchers with a deeper understanding of the operating principles of these devices. Authored by an experienced user and manufacturer of photomultipliers, this handbook gives the reader insights into photomultiplier behaviour as a means to optimize performance. Diffuse and low level light sources are best served with a photomultiplier for the detection of single photon emissions. Light detection and electron multiplication are statistical in nature and the mathematics of these processes is derived from first principles. The book covers other related topics such as scintillation counting, light guides, and large area detectors. The usually complicated subject of biasing a photomultiplier, very important for optimal performance, is reduced to a comprehensible set of calculations. All applications demand some form of electronics, the options for which are fully explored in this book.

Beyond the Mountain Steve House 2012-12-21 "An exceptional book." - Winner - Boardman Tasker Prize 2009 Winner - Mountain Literature Award, Banff Mountain Book Festival 2009 Reinhold Messner calls Steve House the best high-altitude climber in the world today, an honour he declines. "Being called the 'best,'" says Steve, "makes me very uncomfortable. My intention is to be as good as I can be. Mountaineering is too complex to be squeezed into a competition. It is simply not something that lends itself to comparison. Climbing is about process, not achievement. The moment your mind wanders away from the task of the climbing at hand will be the moment you fail." Beyond the Mountain is the award-winning title from Steve House - arguably the world's leading high-altitude climber. Winner of the prestigious Boardman Tasker Prize for Mountain Literature in 2009, Beyond the Mountain is now available in the UK and Ireland thanks to Vertebrate Publishing. Steve House built his reputation on ascents throughout the Alps, Canada, Alaska, the Karakoram and the Himalaya that have expanded the possibilities of style, speed and difficulty. In 2005, Steve and fellow alpinist Vince Anderson pioneered a direct new route on the Rupal Face of 26,660-foot Nanga Parbat, which had never before been climbed in alpine style. It was the third ascent of the face and the achievement earned Steve and Vince the first Piolet d'Or (Golden Ice Axe) awarded to North Americans. Steve is an accomplished and spellbinding storyteller in the tradition of Maurice Herzog and Lionel Terray. Beyond the Mountain is a gripping read - already a mountain classic. It addresses many issues common to non-climbing life - mentorship, trust, failure, success, goal setting, heroes, partnership - as well as the mountaineer's heightened experience of risk and the deaths of friends. Beyond the Mountain is a window into the process of a man working to be the best he can be through an endeavour very few can begin to imagine.

In Living Color Rochelle A. Diamond 2012-12-06 A contribution towards making this increasingly valuable technology accessible to researchers, including the students, post-doctoral scholars, and technicians gathering the knowledge inherent in this integration between analysis and physical isolation/purification methodologies. A step-by-step approach to the methodology for measuring various attributes demonstrated in the particular cells of interest is provided, as is a myriad of resources to fuel the curiosity and answer questions of both new and adept users. This book stems from the editors'experiences managing flow cytometry/cell sorting core facilities for the emerging researchers, in particular in developmental, cellular, and molecular biology.
