Beyond Artificial Intelligence Alain Cardon 2018-11-06 This book will present a complete modeling of the human psychic system that allows to generate the thoughts in a strictly organizational approach that mixes a rising and falling approach. The model will present the architecture of the psychic system that can generate sensations and thoughts, showing how one can feel thoughts. The model developed into an organizational architecture based on massive multiagent systems. The architecture will be fully developed, showing how an artificial system can be endowed with consciousness and intentionally generate thoughts and, especially, feel them. These results are multidisciplinary, combining both psychology and computer science disciplines.

Mental Time Travel Kourken Michaelian 2016-02-05 Drawing on current research in psychology, a new philosophical account of remembering as imagining the past. In this book, Kourken Michaelian builds on research in the psychology of memory to develop an innovative philosophical account of the nature of remembering and memory knowledge. Current philosophical approaches to memory rest on assumptions that are incompatible with the rich body of theory and data coming from psychology. Michaelian argues that abandoning those assumptions will result in a radically new philosophical understanding of memory. His novel, integrated account of episodic memory, memory knowledge, and their evolution makes a significant step in that direction. Michaelian situates episodic memory as a form of mental time travel and outlines a naturalistic framework for understanding it. Drawing on research in constructive memory, he develops an innovative simulation theory of memory; finding no intrinsic difference between remembering and imagining, he argues that to remember is to imagine the past. He investigates the reliability of simulational memory, focusing on the adaptivity of the constructive processes involved in remembering and the role of metacognitive monitoring; and he outlines an account of the evolution of episodic memory, distinguishing it from the forms of episodic-like memory demonstrated in animals. Memory research has become increasingly interdisciplinary. Michaelian's account, built systematically on the findings of empirical research, not only draws out the implications of these findings for philosophical theories of remembering but also offers psychologists a framework for making sense of provocative experimental results on mental time travel.

*Rationalized Epistemology* Albert A. Johnstone 1991-10-18 This book examines skeptical problems originally raised by Descartes and Hume and currently discussed in philosophy of mind, philosophy of language, metaphysics, and epistemology. It answers the basic skeptical questions concerning the existence of what is now unperceived, the reality of what is perceived, and the existence of an external world. Johnstone shows how the recently proposed solutions to these skeptical problems—pragmatic, coherentist, linguistic, and new-Kantian—do not and cannot work, and how only a return to foundational investigation on the terrain of the radical skeptic is adequate to the task. His analyses make for a valuable summary of every significant argument brought against skepticism. In the course of his investigation, Johnstone probes a number of topical issues: knowledge, rationality, the nature of meaning, nonverbal thinking, the bodily nature of the thinking self, parasitism, the role of the tactile-kinesthetic body in feeling and belief, and the necessary role of free will in epistemology.

*Hands of Light* Barbara Ann Brennan 1988 Building on the ideas of holistic medicine, this book develops the idea of the human energy field, exploring how this can be tapped into to promote healing

*The Book of Telling* 2008-01-01 Sharona Ben-Tov Muir discovered after the death of her father, inventor and New Age guru Itzhak Bentov, that he had created Israel's first rocket. A secret group of scientists working in a rooftop shed, the "Science Corps," of which he was a part, invented weapons during Israel's war of independence and later developed Israel's nuclear resources and other major scientific projects. Bentov, however, settled in Boston and made his fortune with such medical inventions as a cardiac catheter, which he created in his home laboratory, where Muir played as a child. Haunted by the question of why her father had never discussed his past, Muir traveled to Israel to find the Corps. Through her own memories and the memories they share, Muir comes to know the brilliant, impassioned, and creative young Bentov as he demonstrates his latest invention for her, takes her canoeing, and reveals his thoughts about consciousness and the cosmos. Muir elegantly evokes the hubbub of Jerusalem streets, the wartime adventures of her hosts, and the inner lives of Israelis. The resulting story of invention and self-invention, of the Corps's wartime experience as told for the first time, and of a deep, abiding love between father and daughter is an incandescent memoir. The author provides a new preface for this new Bison Books edition.

Tertium Organum P. D. Ouspensky 2009-01-01 "An imposing edifice of thought. Every one of its twenty chapters will richly repay careful reading. Those passages dealing with ethics, love, the significance of knowledge, and the meaning of life are hard to surpass." - New York Evening Post The title of this book, Tertium Organum, boldly refers no less to a reorganization of all knowledge, but it is primarily a study of psychology, more specifically the psychology of our higher mind. For Ouspensky what we can call the higher mind represents, within a single person, the development of an entirely new way of understanding. In short, psychology is the art of self-study. With remarkable scope and sophistication, Ouspensky shows us in this book, which has been hailed as "a work of genius," just how vast and strange our universe really is.

**The Practice of Dzogchen** Longchenpa 2014-10-28 A classic collection of writings on the meditation practice and theory of Dzogchen, the Great Perfection, by the celebrated fourteenth-century scholar and adept Longchen Rabjam (Longchenpa). This classic collection of texts on the meditation practice and theory of Dzogchen presents the Great Perfection through the writings of its supreme authority, the fourteenth-century Tibetan scholar and visionary Longchen Rabjam. The pinnacle of Vajrayana practice in the Nyingma tradition of Tibetan Buddhism, Dzogchen embodies a system of training that awakens the intrinsic nature of the mind to reveal its original essence, utterly perfect and free from all duality—buddha nature, or buddhahood itself. In *The Practice of Dzogchen*, Tulku Thondup translates essential passages from Longchen Rabjam's voluminous writings to illuminate and clarify this teaching. He also draws on the works of later masters of the tradition, placing Dzogchen in context both in relation to other schools of Buddhism and in relation to the nine-vehicle outline of the Buddhist path described in the Nyingma tradition. This expanded edition includes

*Counsel for Liberation*, Longchenpa's poetic exhortation to readers to quickly enter the path of liberation, the first step toward the summit of Dzogchen practice.

The Evolution of God Ariel B Tzadok 2020-12-22 All too many people come to a study of Kabbalah from the perspective of academia and book learning. Doing this will indeed give one information on the subject just as learning any other subject will do the same. But Kabbalah is not like any other subject! Kabbalah is not something that one studies, Kabbalah is something that one does! In order to practice the Kabbalah, one must first understand its intricate language of metaphors. Indeed, without understanding the symbols, and what the symbols actually mean, one will never be able to apply them properly, and come to experience the higher "spiritual" realities which surround us. This book is your guide to understanding many of the concepts, symbols, and metaphors of the Kabbalah, as it has been presented and studied since the 13th century. Herein are discussed in-depth lessons from the master Kabbalist, Rabbi Hayim Vital, who recorded for us the Kabbalistic Torah of the Ari'zal. Rabbi Vital's language is more intense in its usage of metaphor and symbol than any other school of Kabbalah. Yet, to understand it literally is a terrible misfortune. This book will open to the reader the underlying psychic/psychological true meanings of the system, and how the explanation of the Supernal Worlds is actually an explanation of the worlds within the human psyche and soul. Also included in this book is a section about Torah and Yoga. The similarities and the differences between these systems have confused many for years. The included Kabbalistic teachings will offer the readers insight that will finally resolve many unanswered questions about this topic. The revelations in this book are long overdue. But now they are available to the sincere seeker. If this is you, you already know it, and you also already know that this book is for you!

**Tuning the Student Mind** Molly Beauregard 2020 How can we rethink teaching practices to include and engage the whole student? What would student experience look like if we integrated silence and feeling with empirical analysis? *Tuning the Student Mind* is the story of one teacher's attempt to answer these questions by creating an innovative college course that marries the spiritual and the theoretical, integrating meditation

and self-reflection with more conventional academic curriculum. The book follows Molly Beauregard and her students on their intellectual and spiritual journey over the course of a semester in her class, "Consciousness, Creativity, and Identity." Interweaving personal stories, student writing, and Beauregard's responses, along with recommendations for further reading and a research appendix, it makes the case for the transformative power of consciousness-centered education. Written in a warm, engaging voice that reflects Beauregard's teaching style, *Tuning the Student Mind* provides an accessible, step-by-step template for other educators, while inviting readers more broadly to reconnect with the joy of learning in and beyond the classroom.

**The Divine Pymander** Hermes Mercurius Trismegistus 2019-01-08 In this Book, though so very old, is contained more true knowledge of God and Nature, than in all the Books in the World besides, except only Sacred Writ; And they that shall judiciously read it, and rightly understand it, may well be excused from reading many Books; the Authors of which, pretend so much to the knowledge of the Creator, and Creation. If God ever appeared in any man, he appeared in him, as it appears by this Book. That a man who had not the

benefit of his Ancestors' knowledge, being as I said before, The first inventor of the Art of Communicating Knowledge to Posterity by writing, should be so high a Divine, and so deep a Philosopher, seems to be a thing more of God than of Man; and therefore it was the opinion of some That he came from Heaven, not born upon Earth [Goropius Becanus]. There is contained in this Book, that true Philosophy, without which, it is impossible ever to attain to the height, and exactness of Piety, and Religion. According to this Philosophy, I call him a Philosopher, that shall learn and study the things that are, and how they are ordered, and governed, and by whom, and for what cause, or to what end; and he that doth so, will acknowledge thanks to, and admire the Omnipotent Creator, Preserver, and Director of all these things. And he that shall be thus truly thankful, may truly be called Pious and Religious: and he that is Religious, shall more and more know where and what the Truth is: And learning that, he shall yet be more and more Religious. The glory and splendour of Philosophy, is an endeavoring to understand the chief Good, as the Fountain of all Good: Now how can we come near to, or find out the Fountain, but by making use of the Streams as a conduct to it? The operations of Nature, are Streams running from the Fountain of Good, which is God. I am not of the ignorant, and foolish opinion of those that say, The greatest Philosophers are the greatest Atheists: as if to know the works of God, and to understand his goings forth in the Way of Nature, must necessitate a man to deny God. The Scripture disapproves of this as a sottish tenet, and experience contradicts it: For behold! Here is the greatest Philosopher, and therefore the greatest Divine.

*Principles of Neurotheology* Assoc Prof Andrew B Newberg 2013-06-28 "Neurotheology" has garnered substantial attention in the academic and lay communities in recent years. Several books have been written addressing the relationship between the brain and religious experience and numerous scholarly articles have been published on the topic, some in the popular press. The scientific and religious communities have been very interested in obtaining more information regarding neurotheology, how to approach this topic, and how

science and religion can be integrated in some manner that preserves both. If neurotheology is to be considered a viable field going forward, it requires a set of clear principles that can be generally agreed upon and supported by both the theological or religious perspective and the scientific one as well. Principles of Neurotheology sets out the necessary principles of neurotheology which can be used as a foundation for future neurotheological discourse. Laying the groundwork for a new synthesis of scientific and theological dialogue, this book proposes that neurotheology, a term fraught with potential problems, is a highly useful and important voice in the greater study of religious and theological ideas and their intersection with science.
