PCB Design for Real-World EMI Control Bruce R. Archambeault 2002-08-31 Proper design of printed circuit boards can make the difference between a product passing emissions requirements during the first cycle or not. Traditional EMC design practices have been simply rule-based, that is, a list of rules-of-thumb are presented to the board designers to implement. When a particular rule-of-thumb is difficult to implement, it is often ignored. After the product is built, it will often fail emission requirements and various time consuming and costly add-ons are then required. Proper EMC design does not require advanced degrees from universities, nor does it require strenuous mathematics. It does require a basic understanding of the underlying principles of the potential causes of EMC emissions. With this basic understanding, circuit board designers can make trade-off decisions during the design phase to ensure optimum EMC design. Consideration of these potential sources will allow the design to pass the emissions requirements the first time in the test laboratory. A number of other books have been published on EMC. Most are general books on EMC and do not focus on printed circuit board is intended to help EMC engineers and design design. This book engineers understand the potential sources of emissions and how to reduce, control, or eliminate these sources. This book is intended to be a 'hands-on' book, that is, designers should be able to apply the concepts in this book directly to their designs in the real-world.

Temporomandibular Disorders Daniel M. Laskin 2006 This multidisciplinary textbook presents a unique approach to diagnosis and management of the various temporomandibular disorders. Written by a large group of eminent researchers and clinicians, it links current scientific concepts of basic anatomy, physiology, biomechanics, and pathology of the temporomandibular joint with specific diagnostic and treatment protocols that are based on sound clinical data. Thus, in keeping with the current thrust in medicine and dentistry, the book provides access to the best available evidence so that clinicians can make informed rather than empirical decisions about what is appropriate therapy. Where lack of data or rapid changes in a particular discipline do not allow for evidence-based conclusions or recommendations, the book highlights the areas of agreement and disagreement in order to expose the deficiencies in our present knowledge base. In a field of treatment long associated with controversy, this book educates readers about which current practices of diagnosis and treatment are strongly supported by scientific research and which are supported only by practical experience and/or anecdotal evidence.

Education and the Politics of Becoming Diana Masny 2020-10-29 This collection examines education in the light of a politics of becoming. It takes a non-hierarchical transdisciplinary approach, challenging the macropolitics of pre-established governmental and economic agendas for education. Drawing on the philosophy of Gilles Deleuze and Felix Guattari, the contributors consider questions such as how education might engage a politics of becoming, and how education and becoming function in a society of control. Since Deleuze and Guattari contend that a society is defined by its becomings, its transformations, this collection asks how education, itself a process in becoming, may contribute "collective creations" to a society in continual flux. The chapters bring theory and praxis together, deploying power, affect, cartography, space, relationality, assemblage and multiple literacies in order to experiment with music, art, language, teacher education, curriculum and policy studies. This collection is an innovative resource, creating an encounter with the macropolitics of education, and altering teaching, learning, evaluation and curriculum. This book was originally published as a special issue of Discourse: Studies in the Cultural Politics of Education.

The Cambridge Handbook of International and Comparative Trademark Law Irene Calboli 2020-09-30 Trade in goods and services has historically resisted territorial confinement,

but trademark protection remains territorial, albeit within an increasingly important framework of multilateral treaties. Trademark law therefore demands that practitioners, policy-makers and academics understand principles of international and comparative law. This handbook assists in that endeavour, with chapters describing and critically analyzing international and regional frameworks, and providing comparative perspectives on the substantive issues in trademark law and related fields, such as geographic indications, advertising law, and domain names. Chapters contrast common law and civil law approaches while focusing on the US and EU trademark systems in light of the role these systems have played in the development of trademark laws. Additionally, this handbook covers other jurisdictions, both common law and civil law, on the Asia-Pacific, African, and South American continents. This work should be read by anyone seeking a better understanding of trademark law around the world.

Quantum Chromodynamics at High Energy Yuri V. Kovchegov 2012-08-30 Filling a gap in the current literature, this book is the first entirely dedicated to high energy quantum chromodynamics (QCD) including parton saturation and the color glass condensate (CGC). It presents groundbreaking progress on the subject and describes many problems at the forefront of research, bringing postgraduate students, theorists and interested experimentalists up to date with the current state of research in this field. The material is presented in a pedagogical way, with numerous examples and exercises. Discussion ranges from the quasi-classical McLerran-Venugopalan model to the linear BFKL and nonlinear BK/JIMWLK small-x evolution equations. The authors adopt both a theoretical and an experimental outlook, and present the physics of strong interactions in a universal way, making it useful for physicists from various subcommunities of high energy and nuclear physics, and applicable to processes studied at all high energy accelerators around the world. But no matter how much he craved logic and reason, his body craved Juliette more. Juliette is fascinated by Marcus's stoicism. How could he walk down the street and not feel the joy in the sunshine? And how could her mind and body need a man who didn't understand the joy of living life for the moment? Enjoy the fifth book in The Alfieri Saga!

Voices of Hope Carole B. Shmurak 1998 Fueled by media reports of gender bias in the schools, the debate over single sex education has been recently renewed. "Voices of Hope" asks for a reconsideration of the framing of that debate. For whom is single sex education better? For the attainment of which goals? What do girls gain by being schooled with male peers? What is lost? In this longitudinal study of more than fifty high school girls at four New England independent schools, Carole B. Shmurak follows their development from ninth grade through the first year of college. Case studies capture the girls' own voices as they describe their hopes for their futures and the events that subsequently affect those futures.
